

Carsino User Manual

Installation

1. In order to install the software you need to first download it via Android Studio.
2. Then in order to make sure that Android Studio can identify all the parts you need to navigate to the "Project"-view and right-click "androidwheel" and "app" individually. Then click on "Make Module 'androidwheel/app'" respectively. Allow gradle to finish.
3. Now the application should be runnable on your emulator or device by running the "app".

Do note! You need to have an available voice recognition service otherwise the app will crash once calls are made that are directed towards the service that then does not exist if voice recognition is unavailable. Most emulators does not have this, it might be better to test it on a real device.

Do note. Different phones have different resolution, therefore the slots may appear small or big depending on your current platform.

Using the application

- When you start the application you are presented with a three button menu.
 - The first button starts the game.
 - The second button views the highscore.
 - The third button is a simple about dialog.
- When you start the game you will see the slot machine. At this point if you are to start driving or loosen your handbrake the screen will go black yet the game will keep on running.
- In order to play the game meanwhile you can see the dialog you simply click anywhere except on the slots themselves. If the screen is black simply say "spin" clearly or if you're swedish then "rulla" is also fine. This command can also be used when the screen isn't black. You can also embed the keyword in a shorter sentence like, "spin the wheel".
- While playing the game you will be hearing a tune each time the game has done a spin to signify whether you lost, got a small win, medium win or high win. It is only on high wins that you will receive more spins.
- Once you run out of spins you will be presented with a dialog window where you can choose to submit your score to the database or quit the game and go back to the main menu.
